

Technology to replicate the full acoustic character of a place

The technology extracts specific acoustic elements from a two-channel signal, and reproduces in a manner that provides a wide range of realism, such that the need for rear speakers can be eliminated

Technology to extract a two-dimensional acoustic field

- audio signal processing technology
- multi-channel speaker control technology

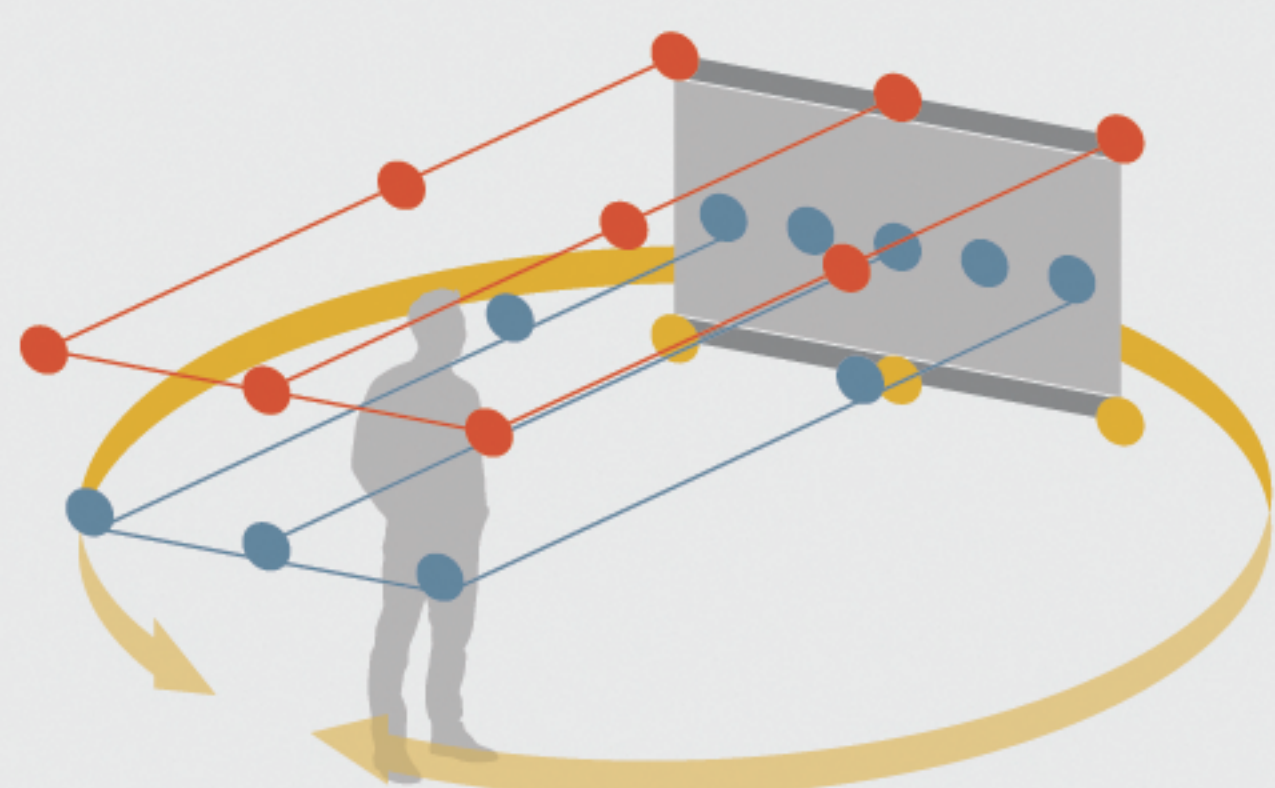

Multi-channel sound system playback technology

- audio signal processing technology
- multi-channel speaker control technology

Trans-Aural playback technology

Multi-channel stereophonic sound can be played back in three dimensions with front speaker only.

binaural playback technology

Multi-channel stereophonic sound can be played back in three dimensions with headphone.
